Summary of CV

This section describes briefly a summary of your career in science, academic and research; the main scientific and technological achievements and goals in your line of research in the medium -and long- term. It also includes other important aspects or peculiarities.

My research work has been carried out at the Autonomous University of Madrid, with two postdoctoral stays at the Universities of Hahnemann (Philadelphia) (1989-1990) and New York (1990-1991), and another of short duration at the Pasteur Institute in Paris (France) within the framework of a complementary action between Spain and France (1998-1999). In 1985, I joined the line of research in Animal Cytogenetics where I did my Doctoral Thesis (8 publications). From 1989, I made a change of research line towards Cancer Genetics, where I have carried out my work until today. In the first year of my postdoctoral stay, I dedicated myself to the analysis of fragile chromosomal sites and their relationship with cancer (1 publication). In the second year, I approached the study of cancer from a molecular genetic point of view looking for tumor suppressor genes in a mouse model based on the induction of mouse thymic lymphomas with gamma radiation (2 articles). After my reincorporation to Spain, I actively collaborated in the implementation of this last research line, participating as a researcher in 10 projects of the National Plan, uninterruptedly (1994-2016), and 2 of the Madrid Autonomous Community, the latter as PI (2000-2001, 2001-2002). From 1998 to 2010, I led a line of research focused on the identification of genes that confer resistance to tumor development, using a mouse model generated from strains with a differential sensitivity to tumor development. This line of work has been funded by two collaborative research projects from the European Union in which I have participated both as coordinator (1998-2000) and IP (2004-2008). From 2009 to 2013 I have also participated in a research network of the European Union whose objective is the systematic analysis of human genetic diseases (cancer in our case) through the use of mouse models (Action COST BM0901). Since 2010, I have participated in the initiative promoted by the European Union "Multidisciplinary Low Dose Initiative (MELODI)", whose main objective is to study the genetic effects of exposure to low doses of ionizing radiation in the European population with a view to improving radiation protection programs within the European Union. This research was funded by the Nuclear Safety Council (2011-2015; 2018-2021) and the European Union (2015-2016) through research projects in which I am listed as coordinator or IP. My participation in this research line also extends to management tasks as a member of the governing council of MELODI. Currently, I work as PI, in a project funded by the Ministry of Science, Innovation and Universities (RTI2018-093330-B-I00) (2019-2021) to discover new genetic and epigenetic biomarkers in lymphoblastic neoplasia of human T cells using genomic approaches. I have published 46 articles as a senior researcher.

I have recognized five periods of research activity certified by the CNEAI. In addition, I have directed 11 Doctoral Theses, and I am co-inventor of three patents.
